Filquip Vacuum Truck Replacement Filters

Filquip has extensive stocks of 155mm diameter by 1m long filter cartridges on the shelf and can make any Vac-Truck filter bag required for any model.

Filquip Vac Truck filters are made from spun bond polyester (240g/m²). We also carry special versions with advanced filter media for hazardous and special applications. Every filter comes with a sealing snap band in the top ready for installation into your truck.

The filters play a critical role in protecting the blower from damaging foreign materials. Good filters reduce the vacuum pressure required to be generated and results in less energy/fuel being required to operate the Vac Truck. Broken or low efficiency filters can result in the lobes of the blower being eroded adding extra maintenance and unexpected shut down costs.

Filquip PB15510 Vac Truck Replacement Filters "Available off the Shelf"

Vac Truck Filter that has not been maintained

Vac Truck Filter set that have broken filters letting foreign materials into the blower seals and blades

"Specialists in material handling equipment for powders & granules."
